a
b
c
output per agent Y/N
system size N
local exponent $\beta(N)$
$a = 0.76$
$a = 0.82$
$a = 0.90$
$a = 1.00$
$a = 1.10$
$a = 1.18$
$a = 1.24$
scaling exponent β
area exponent a (area $\propto N^a$)
prediction $1 + \varepsilon(1-a)$, $\varepsilon = 0.88$
(constant-density runs)
fit, $\varepsilon = 0.89$
city-like: $a < 1$, $\beta > 1$
company-like: $a > 1$, $\beta < 1$
